

Quick reference for daily terminal use

By HexSec Comunity

[illegible]

System Information

`systeminfo` — Full system information

`hostname` — Show device hostname

`whoami` — Current logged-in user

`Get-ComputerInfo` — Detailed Windows configuration

`Get-Date` — Current system date/time

`Get-TimeZone` — Show timezone settings

`Get-Uptime` — Device uptime information

`Get-CimInstance Win32_BIOS` — BIOS details

`Get-CimInstance Win32_OperatingSystem` — OS information

`Get-Culture` — System language settings

`Get-CimInstance Win32_Processor` — CPU information

`Get-CimInstance Win32_PhysicalMemory` — RAM module details

`Get-CimInstance Win32_LogicalDisk` — Disk usage overview

`Get-CimInstance Win32_NetworkAdapterConfiguration` — Network adapter config

`Get-WmiObject Win32_ComputerSystem` — Hardware/system details

`Get-PSVersionTable` — PowerShell version info

Network Enumeration

`ipconfig` — Show IP configuration

`ipconfig /all` — Detailed adapter information

`Test-NetConnection google.com` — Check remote connectivity

`Resolve-DnsName google.com` — DNS lookup results

`Get-NetIPAddress` — List local IP addresses

`Get-NetAdapter` — Show network adapters

`Get-NetRoute` — Display routing table

`Get-DnsClientServerAddress` — DNS server configuration

`Get-NetTCPConnection` — Active TCP connections

`arp -a` — Show ARP cache

`ping 8.8.8.8` — Basic connectivity test

`tracert google.com` — Trace network route

`nslookup google.com` — DNS query check

`netstat -ano` — Connections with process IDs

`Get-NetIPConfiguration` — Full network summary

`Get-NetNeighbor` — Local neighbor table

hexsecteam hexsec_tools hexsecteam

Processes & Services

Get-Process — Running processes list

Get-Service — List Windows services

Stop-Process -Name notepad — Stop target process

Start-Process notepad.exe — Launch application

Restart-Service spooler — Restart Windows service

Get-Process | Sort CPU -desc — High CPU usage

Get-Service | Where Status -eq "Running" — Active services only

tasklist — Quick process overview

Get-Job — Background PowerShell jobs

Wait-Process — Wait for process exit

Get-Process | Sort WorkingSet -desc — High memory usage

Get-Service | Where StartType -eq "Automatic" — Auto-start services

Get-CimInstance Win32_Service — Detailed service info

sc query — Service status overview

taskkill /PID 1234 — Kill process by PID

Get-Process | Export-Csv processes.csv — Save process report

Event Logs & Monitoring

`Get-EventLog -LogName Security` — Read security logs

`Get-WinEvent -LogName System` — System event monitoring

`Clear-EventLog Application` — Clear logs, caution

`Get-EventLog -Newest 20` — Recent event entries

`Get-WinEvent -MaxEvents 10` — Latest event records

`wevtutil el` — List event logs

`Get-EventSubscriber` — Event subscriptions list

`Get-History` — PowerShell command history

`Start-Transcript` — Record PowerShell session

`Stop-Transcript` — Stop session logging

`Get-WinEvent -ListLog *` — Show all logs

`Get-WinEvent -LogName Application` — Application log review

`Get-EventLog -LogName System -Newest 50` — Latest system logs

`wevtutil qe System /c:10` — Query recent events

`Get-WinEvent -FilterHashtable`

`@{LogName="Security";Id=4624}` — Logon events

`Get-WinEvent -FilterHashtable`

`@{LogName="Security";Id=4625}` — Failed logons

File & Directory Operations

Get-ChildItem — List files/directories

Set-Location C:\ — Change current directory

New-Item test.txt — Create new file

Copy-Item file.txt backup\ — Copy files safely

Move-Item file.txt archive\ — Move files/directories

Remove-Item temp.txt — Delete file carefully

Rename-Item old.txt new.txt — Rename files quickly

Get-Content logs.txt — Read file contents

Select-String "error" — Search inside files

Compress-Archive logs.zip — Create ZIP archive

Expand-Archive logs.zip — Extract ZIP archive

Test-Path C:\Temp — Check path exists

Get-Item file.txt — File metadata

Get-ChildItem -Recurse — Recursive file listing

Get-FileHash file.exe — Calculate file hash

Compare-Object file1 file2 — Compare file content

hexsecteam hexsec_tools hexsecteam

Security & Defender

Get-MpComputerStatus — Microsoft Defender status

Get-MpThreatDetection — Detected threats overview

Start-MpScan — Run Defender scan

Update-MpSignature — Update Defender signatures

Get-ExecutionPolicy — Current script policy

Set-ExecutionPolicy RemoteSigned — Allow signed scripts

Get-LocalUser — Local user accounts

Get-LocalGroup — Local groups overview

Get-FileHash file.exe — Verify file integrity

Get-Acl sensitive.txt — File permissions review

Get-MpPreference — Defender configuration

Get-NetFirewallProfile — Firewall profile status

Get-NetFirewallRule — Firewall rules list

Get-BitLockerVolume — BitLocker protection status

Get-AppLockerPolicy -Local — AppLocker local policy

Get-AuthenticodeSignature file.exe — Check file signature

hexsecteam hexsec_tools hexsecteam

Users & Permissions

`net user` — List local users

`net localgroup administrators` — Admin group members

`Get-LocalGroupMember Administrators` — Detailed admin users

`whoami /priv` — Current user privileges

`quser` — Logged-in user sessions

`Get-Credential` — Secure credential prompt

`Get-LocalUser | Where Enabled -eq $true` — Enabled accounts only

`Enable-LocalUser username` — Enable local account

`Disable-LocalUser username` — Disable local account

`Set-LocalUser username` — Modify local user settings

`whoami /groups` — Current user groups

`Get-LocalGroupMember Users` — Standard users list

`net accounts` — Password policy overview

`Get-Acl C:\Users` — Folder permission review

`icacls C:\Users` — NTFS permissions check

`Get-SmbShare` — Shared folders overview

PowerShell Scripting Basics

Get-Command — Available PowerShell commands

Get-Help Get-Process — Command help page

Get-Alias — View command aliases

Get-Module — Loaded PowerShell modules

Import-Module ActiveDirectory — Load module manually

Measure-Object — Count/analyze objects

Where-Object — Filter output results

ForEach-Object — Loop through objects

Export-Csv report.csv — Export data to CSV

ConvertTo-Json — Convert objects to JSON

Select-Object Name,Status — Choose output fields

Sort-Object Name — Sort command output

Group-Object Status — Group results quickly

Out-File report.txt — Save output to file

Import-Csv users.csv — Read CSV data

Read-Host "Input" — Ask user input

hexsecteam hexsec_tools hexsecteam

Remote Administration

Enter-PSSession host — Interactive remote session

Invoke-Command — Execute remote commands

Test-WSMan host — Verify WinRM access

New-PSSession host — Create remote session

Get-PSSession — Active PowerShell sessions

Remove-PSSession * — Close remote sessions

Enable-PSRemoting — Enable remote management

Get-HotFix — Installed security updates

Get-ScheduledTask — Scheduled task review

schtasks /query — List scheduled tasks

Restart-Computer -ComputerName host — Remote reboot

Get-CimSession — Active CIM sessions

New-CimSession host — Create CIM session

Get-WmiObject Win32_OperatingSystem — Remote system info

Invoke-Command -ScriptBlock {hostname} — Run script block

Test-Connection host — Ping remote host

hexsecteam hexsec_tools hexsecteam

Useful Admin & Troubleshooting Commands

Restart-Computer — Reboot Windows machine

Stop-Computer — Shutdown computer safely

Get-Disk — Show disk information

Get-Volume — List mounted volumes

Get-Clipboard — Read clipboard contents

Set-Clipboard "text" — Copy text instantly

Clear-RecycleBin — Empty recycle bin

Get-PSDrive — Available system drives

Get-History | Export-Csv history.csv — Save command history

cls — Clear terminal screen

sfc /scannow — Repair system files

DISM /Online /Cleanup-Image /RestoreHealth — Repair Windows image

chkdsk C: /scan — Scan disk health

Get-Printer — Installed printers list

Get-WindowsUpdateLog — Build update log

powercfg /batteryreport — Battery health report
