

# KALI LINUX 50 TOOLS

Essential Security Toolkit

FROM RECON TO REPORTING

PART 2 / 8

## Wireless & Exploitation

Wireless Security + Exploitation Frameworks

Aircrack-ng, Aircgeddon, Fluxion, Reaper/Bully, Wifite, Metasploit, BeEF, SET

by HexSec Community

EDUCATIONAL CONTENT ONLY

# Aircrack-ng Suite

- **airmon-ng** — manage wireless interface monitor mode
- **airmon-ng check** — show processes that may interfere with monitoring
- **airmon-ng check kill** — stop interfering processes for lab setup
- **airodump-ng** — capture and inspect nearby wireless traffic in an authorized lab
- **airodump-ng --band abg wlan0mon** — scan across common Wi-Fi bands
- **aircrack-ng --help** — view available options and syntax
- **airdecap-ng --help** — view offline packet decryption utility help
- **airdecloak-ng --help** — inspect cloaked network support options
- **airolib-ng --help** — view WPA/WPA2 database utility options
- **packetforge-ng --help** — view packet crafting utility help
- **airserv-ng -h** — view remote capture server utility help
- **airtun-ng --help** — view virtual tunnel utility help

# Airgeddon

- `git clone https://github.com/v1s1t0r1sh3r3/airgeddon.git` — clone the official Airgeddon repository
- `cd airgeddon` — enter the project directory
- `chmod +x airgeddon.sh` — make the launcher executable
- `sudo bash airgeddon.sh` — launch Airgeddon from Bash
- `AIRGEDDON_AUTO_UPDATE=false bash airgeddon.sh` — start without automatic update checks
- `AIRGEDDON_SKIP_INTRO=true bash airgeddon.sh` — skip the intro animation on launch
- `AIRGEDDON_BASIC_COLORS=false bash airgeddon.sh` — disable colored output for a simpler display
- `AIRGEDDON_5GHZ_ENABLED=false bash airgeddon.sh` — start with 5 GHz support disabled
- `AIRGEDDON_SILENT_CHECKS=true bash airgeddon.sh` — run dependency and root checks silently
- `AIRGEDDON_DEVELOPMENT_MODE=true bash airgeddon.sh` — enable development mode for faster startup
- `AIRGEDDON_DEBUG_MODE=true bash airgeddon.sh` — enable debug output for troubleshooting
- `AIRGEDDON_WINDOWS_HANDLING=tmux bash airgeddon.sh` — use tmux window handling on headless systems
